More about the Project

Total Duration: 3 Years (August 2021-August 2024)

The aim of the project is to develop a cost effective, portable, and powered exoskeletal orthosis. The project by its very nature is multidisciplinary and will involve:

- Mechanical design and fabrication of the orthosis.
- Integration of different sensors and actuators.
- Human gait phase detection using signal processing and pattern recognition techniques.
- Selection/design of actuators, controllers and power supply, etc.

This collaborative project demands interaction with medical practitioners and occasional travel between the participating institutes. Significant part of the project also requires going to the medical college and testing of the prototype.
